<b>5 Indices and tables</b>	<b>11</b>

pyzk is an unofficial library of zksoftware the fingerprint attendance machine. It's easy to use and no need to understand how to communicate to device. Just create ZK instance and you will ready to use api.

# CHAPTER 1

---

## Installation

---

You can install from two different options

1. from pypi

```
$ pip install pyzk
```

2. from original repository

Go to <https://github.com/fananimi/pyzk> and clone the latest source code by using git, and then just execute the setup.py file.

```
$ python setup.py install
```

# CHAPTER 2

---

## Basic Usage

---

```
from zk import ZK, const

conn = None
zk = ZK('192.168.1.10', port=4370, timeout=5)
try:
    print 'Connecting to device ...'
    conn = zk.connect()
    print 'Disabling device ...'
    conn.disable_device()
    print 'Firmware Version: : {}'.format(conn.get_firmware_version())
    # print '--- Get User ---'
    users = conn.get_users()
    for user in users:
        privilege = 'User'
        if user.privilege == const.USER_ADMIN:
            privilege = 'Admin'

        print '- UID {}'.format(user.uid)
        print ' Name      : {}'.format(user.name)
        print ' Privilege : {}'.format(privilege)
        print ' Password   : {}'.format(user.password)
        print ' Group ID  : {}'.format(user.group_id)
        print ' User ID   : {}'.format(user.user_id)

    print "Voice Test ..."
    conn.test_voice()
    print 'Enabling device ...'
    conn.enable_device()
except Exception, e:
    print "Process terminate : {}".format(e)
finally:
    if conn:
        conn.disconnect()
```

# CHAPTER 3

---

## API Usage

---

### Connect/Disconnect

```
conn = zk.connect()  
conn.disconnect()
```

### Disable/Enable Connected Device

```
conn.disable_device()  
conn.enable_device()
```

### Get Firmware Version

```
conn.get_firmware_version()
```

### User Operation

```
# Create user  
conn.set_user(uid=1, name='Fanani M. Ihsan', privilege=const.USER_ADMIN, password=  
    '12345678', group_id='', user_id='123')  
# Get all users (will return list of User object)  
users = conn.get_users()  
# Delete User  
conn.delete_user(uid=1)
```

### Attendance Record

```
# Get attendances (will return list of Attendance object)  
attendances = conn.get_attendance()  
# Clear attendances record  
conn.clear_attendance()
```

### Test voice

```
conn.test_voice()
```

## Device Maintenance

```
# shutdown connected device
conn.power_off()
# restart connected device
conn.restart()
```

# CHAPTER 4

---

## Technical Documentation

---

We open to everyone for contribute in this project. Please refer [Communication\\_protocol\\_manual\\_CMD.pdf](#) before you starting write your code.
